MARKETING & CONTENT PLAYBOOK

wrrapd.

An SMS nudge for the one thing you actually want to start doing.

This playbook is the operating manual for turning wrrapd into a paid consumer app using SMS-screenshot content on TikTok and Instagram Reels. It covers the product one-liner, the winning content format, the posting cadence, pricing that actually works with Twilio's per-message cost, and the sequencing strategy alongside Synced.

Product	SMS reminder for one daily habit
Distribution	TikTok organic, SMS-screenshot format
Model	Hard paywall from install, $5/mo
Status	Twilio A2P 10DLC approved, 619 number live
Owner	Solo founder

THE ONE INSIGHT

Wrrapd's product output IS the content

Screenshot-of-text-message is the highest-performing content format on TikTok right now. People stop scrolling for a text message because it looks like content that's for them, not for a marketer. Chat Receipts (WhatsApp analyzer, growing revenue) is built entirely on this insight. Every "he said this and I'm dying" viral post rides the same format.

Wrrapd is inherently in this format. The product's output is a text message. Every real user's real wrrapd nudge is potential content. No fake demos. No screen recordings. Just a screenshot of the SMS on an aesthetic background.

> **Why this beats Synced's content angle**
>
> Climbing content is visual, but it does not have the "stop-scroll" text-message shape baked in. Wrrapd is a natively viral format. That is the reason to build it in parallel, even as a small side product: it is a marketing learning vehicle.

CONTENT LIBRARY

Content formats to ship

Six formats, all built around the SMS as the visual. Rotate them across the week so the feed does not look repetitive. Each one takes under 10 minutes to produce with AI background generation plus a screenshot mockup.

The single-message hook
One SMS screenshot, aesthetic background, 5 to 8 word caption. Example: "This is the text I got today. This is why I actually went to the gym."

The 90-day grid
A 3x4 or 4x4 grid of dated SMS screenshots showing consistency. Caption: "3 months of these texts. Here's what happened." Great for proof-of-work.

POV story text
SMS overlaid on a POV video (bed, mirror, gym parking lot). Caption: "POV: it's 6am and you're about to hit snooze."

The 6 words that broke my streak
Punchline reveal. Video setup with a story, ends on the SMS screenshot as the payoff. Great for hook-then-payoff pacing that TikTok rewards.

Streak comparison
Side by side: text from day 1 vs day 60. Same time, different tone, different result.

User submissions

Repost real texts from paid users (with permission). Free content, social proof, and makes users feel seen. This becomes the acquisition flywheel once you have 20+ users.

DISTRIBUTION

The posting playbook

Volume is the variable. Do not optimize per-post. Optimize the batting average across 90 days of daily posting. Your 20s generated 15 million TikTok views in two weeks by shipping constantly, not by nailing one perfect post.

Daily minimum

- 3 posts a day, 7 days a week, for 90 days. No exceptions.
- TikTok is the primary channel. Cross-post to Instagram Reels the same day.
- First post before 9am, second post around 5pm, third post after 9pm. These are the local scroll windows.
- Videos under 20 seconds. Hook in the first 1.5 seconds. Trending audio when it fits.

Weekly rhythm

- Monday: motivational single-message hook (people set intentions Mondays).
- Tuesday and Wednesday: POV story texts.
- Thursday: 90-day grid or streak comparison (proof-of-work).
- Friday: reveal or payoff format.
- Weekend: user submissions or founder story.

What to measure, what to ignore

Track: watch-time, saves, shares, and app-store click-throughs. Ignore: likes, follower count in isolation, comments unless they surface a real content angle. The only number that matters after 30 days is paid trial starts.

PRICING

Paid from install, no free tier

SMS costs money per message. Twilio A2P 10DLC is roughly $0.0075 per SMS. One nudge a day for 30 days is $0.23 in cost per active user per month. A free tier bleeds money at any scale. Pricing has to solve for this from day one.

Plan	Price	Nudges	Cost/mo	Margin
Trial	Free 7 days	1/day	$0.05	n/a (acquisition cost)
Monthly	$5.00	1/day	$0.23	$4.77
Annual	$39.00	1/day	$2.74/yr	~$36 (73% off vs monthly)

Paywall rules

- Hard paywall in the signup flow. Ask for phone number, then card, then habit.
- 7-day trial is the max. Skip the trial entirely for the first version if simpler.
- No email capture without a card. Signup completion is the only signal that matters.
- Cancellation flow requires reading the last 3 nudges the user got, as a save moment.

SEQUENCING

Run wrrapd alongside Synced, not instead of it

Two apps at once is the classic solo-founder death spiral. Every established indie founder warns about it and they are right. But wrrapd is not a full second business; it is a low-complexity marketing learning vehicle. Sequence deliberately.

Window	Focus
This week + next	Synced through Cohort 1. Real users, watch behavior, iterate on Progress.
Weekends only, 2 weeks	Ship wrrapd MVP: landing page + Stripe + Twilio + one form.
Weeks 3 to 6	SMS-screenshot content playbook on wrrapd. 3 posts a day, minimum.
Week 6 decision	Whichever has traction gets the majority of hours going forward.

Decision framework at week 6

- If wrrapd is pulling paid conversions from organic content, double down on it. Synced coasts on Cohort 1 feedback.
- If Synced users are emotional about the product, double down on Synced. Apply the SMS-screenshot lessons to a Synced angle (pyramid screenshots, week recaps).
- If neither is hitting, both were learning artifacts, not businesses. Decide what to build next with everything you learned.

NEXT ACTIONS

What to do this weekend

- Register wrrapd.com (or the domain you already have) and put a one-page landing.
- Wire Stripe checkout: $5/mo, 7-day trial, phone number field, habit field.
- Backend: on successful checkout, insert a row into Postgres with (phone, habit, time_of_day). Schedule a cron that sends the SMS via Twilio at that time.
- Set up TikTok and Instagram accounts. Handle @wrrapd if available.
- Batch-produce 20 SMS-screenshot posts using AI backgrounds + a mock SMS template.
- Post 3 per day for the next week. Track saves, shares, and clicks to the landing page.

One thing to remember

The point of building wrrapd right now is not to build a second business. It is to use a low-complexity product to learn the marketing system while Synced is still finding its shape with real users. Every lesson from wrrapd’s content playbook feeds back into Synced.

ONE-PAGE SUMMARY

The whole playbook, on one page

Product	SMS nudge for one daily habit. One text, once a day.
Positioning	The friend who checks if you did the thing.
Price	$5/mo or $39/yr. Hard paywall from install.
Content format	SMS screenshot + AI aesthetic background. Six format variants.
Cadence	3 posts a day, 7 days a week, 90 days. TikTok primary, IG Reels cross-post.
Channel	TikTok organic. No paid ads until content system is proven.
North-star metric	Paid trial starts per week.
Kill signal	If under 5 paid trials/week after 6 weeks of daily posting, rethink.
Time budget	Weekends only until Synced Cohort 1 window ends.
Synced relationship	Wrrapd is the marketing lab. Lessons apply back to Synced.

Ship weekly. Post daily. Measure paid trials, not likes. Everything else is noise.
